

PROFESSIONAL SUMMARY

Full Stack Developer specialized in Python/Django and Angular/React, focused on building complete systems rather than isolated interfaces. Experience designing REST APIs, background job processing with Celery and Redis, and integrating a local LLM (Ollama) for automated data analysis in a production SaaS platform. Delivered a full inventory management system for a real institutional client, covering data modeling, role-based permissions, and deployment.

TECHNICAL SKILLS

- Languages:** Python, TypeScript, JavaScript, SQL
- Frontend:** Angular, React, Astro, TypeScript, Tailwind CSS, GSAP, HTML, CSS
- Backend:** Django, Django REST Framework, REST APIs, JWT Authentication
- Databases:** PostgreSQL, SQLite, Redis
- Infrastructure & Automation:** Docker, Podman, Linux, Git, Celery, Celery Beat, Cloudflare Tunnel, Web Scraping
- AI & Integrations:** Ollama (local LLM), Telegram API (Telethon), Web Push Notifications
- Mobile:** Capacitor (Android APK packaging), PWA

PROFESSIONAL EXPERIENCE

Independent Full Stack Developer — Freelance [ADD: dates]

Client: Ministry of Popular Power for Habitat and Housing (Venezuela) — Institutional Inventory Management System

- Developed a full-stack inventory management system using Angular, Django, and Django REST Framework for a government institution, covering product catalog, warehouse-level stock, and inventory movement tracking.
- Designed a role-based access control system (Administrator, Director, Warehouse Operator) enforced through Django Groups and REST API permissions.
- Built a bulk inventory import pipeline from Excel with a two-step review process — analyze, then confirm — that re-validates the original file server-side before committing any change to production stock.
- Implemented JWT-based authentication and deployed the system with Docker on Linux.
- [ADD REAL METRIC: number of products/movements managed, if shareable]

SELECTED PROJECTS

VeneCambio — Financial SaaS Platform [ADD: dates]

React, Vite, Capacitor, Django, Django REST Framework, SQLite, Redis, Celery, Ollama

- Built a production SaaS platform that centralizes official BCV exchange rates, Binance P2P market data (via web scraping), and bank alerts detected from Telegram messages (Telethon) into a single real-time dashboard.
- Implemented background job processing with Celery and Redis to periodically capture pricing data and maintain a queryable price history without blocking the application.
- Integrated a local LLM (Ollama) to generate market analysis narratives — trend, risk, and best trading hours — based strictly on metrics pre-computed deterministically by Django, keeping all numeric calculations auditable and separate from the AI layer.
- Delivered price and bank-alert notifications through Web Push.
- Packaged the web application as a native Android APK using Capacitor, in addition to the web version.

POS / Inventory Management System [ADD: dates]

Angular, Django, Django REST Framework, PostgreSQL

- Developed a full-stack point-of-sale and inventory system for a retail business, modeling products, size/color variants, and warehouse-level stock.
- Built a REST API with Django REST Framework and an Angular frontend for sales, invoicing, and inventory control.
- Implemented dual-currency support (USD/VES) for invoicing and payments.
- Deployed a live functional demo.

Restaurant / Food Business Website [ADD: dates]

Astro, Tailwind CSS, GSAP, Leaflet, OpenStreetMap

- Designed and built a responsive brand website for a food business, including a scroll-animated hero section (GSAP) and an animated product showcase slider.
- Integrated an interactive location map (Leaflet + OpenStreetMap) linked to Google Maps directions.

EDUCATION

[ADD: degree, institution, year — not present in the original resume or provided information]
